

5-Axis Vertical Machining Center
UNIVERSAL CENTER MU-4000V

5-Axis Vertical Machining Center
UNIVERSAL CENTER
MU-4000V

A next generation machine that opens new possibilities in “Monozukuri”^{*1} with “M-E-I-K”^{*2} merging technologies

The MU-4000V is a 5-axis machining center that opens new “Monozukuri” possibilities with superior basic functions for 5-axis machining, a large machining range, and ease of use. It can perform jobs from high quality 5-axis machining to process-intensive machining that exceeds conventional multitasking machines, including turning, cutting, grinding and gear cutting.

It is equipped with the OSP suite, a next-generation intelligent CNC with all the information needed for 5-axis machining—cutting information, tool information, fixture information, simulations and more to increase productivity more than ever.

^{*1} Monozukuri (manufacturing)—the art of “making things” better than ever.

^{*2} The merging of Mechanics - Electronics - Information (IT) - Knowledge (Creation) technologies, only Okuma can provide, as Your Single Source for Machine & Control.

Photographs used in this brochure may show optional equipment.

High-accuracy 5-axis machining

A next generation machine that surpasses the normal

A high-performance machine with the ease of use, work envelope, high accuracy, and high quality demanded in 5-axis machining, all in a compact space.

The MU-4000V merges M-E-I-K technologies to open new areas to multitasking operations—turning, grinding, gear cutting—and expand the possibilities of “Monozukuri” manufacturing.

Highly accurate 5-axis machining

Superior dimensional stability is achieved over many hours with a highly rigid trunnion table that supports accurate 5-axis machining, the 5-Axis Auto Tuning System that automatically measures and compensates for geometric error, and the Thermo-Friendly Concept that minimizes dimensional changes due to changing temperature or heat.

Artificial joint

Satellite parts

Blisk

Operator-friendly

Good access to the table and spindle, a table structure for good visibility of the tool tip, a large window to visually check the machining chamber, and brighter, reduced-flicker LED lamps for all make it easier for operators to perform their work.

Large machining area and tool travel

The machining area is large and tool changes can be done even with the trunnion table swung over.

Shorter machining times with high cutting capability

High torque motors are used for the spindle and turning spindle to handle heavy-duty cutting, difficult-to-cut material and many other types of machining. The result is highly efficient machining.

Flexible expandability to automated systems

In addition to a large capacity ATC magazine, it is easy to install an automatic pallet changer (APC), robots and loaders. The best automated system for the purpose can be built.

Spindle speed	15,000 min ⁻¹
Table top to spindle nose	120 to 580 mm
Table dimensions	ø400 mm
Max workpiece dimensions	ø500 × H400 mm
Max load capacity	300 kg
Rapid traverse	X-Y-Z: 50 m/min
Tool magazine capacity	32-tool (chain magazine)

(19-in. operation panel screen)

High accuracy 5-axis machining with “M-E-I-K” merging technologies

A trunnion table for high accuracy, ease of use, and compactness

The MU-4000V has a very rigid roller gear cam suited to high-speed drive on the trunnion table B-axis, and a direct drive motor that produces high torque even at low speeds on the C-axis. This makes it possible to achieve both high-speed and high-accuracy machining.

High-speed

- B axis: 50 min^{-1}
- C axis: 120 min^{-1} (Standard)
 $1,200 \text{ min}^{-1}$ (Optional) [turning mode]

Indexing accuracy*

- B-axis indexing accuracy/repeatability: $\pm 1.78 \text{ sec} / \pm 0.50 \text{ sec}$
- C-axis indexing accuracy/repeatability: $\pm 2.26 \text{ sec} / \pm 0.12 \text{ sec}$

* [Actual data]

Note: The data mentioned in this brochure are “actual data” and do not represent guaranteed accuracies.

Maximized machining accuracies

Gauging and compensation of geometric error

5-Axis Auto Tuning System (Optional)

Automatic tuning for geometric error is quick, easy, and can be done by anyone

Automatic tuning of a total of 11 different kinds of geometric error, including spindle misalignment and tilt. The accuracy of 5-axis machines is measured in less than 10 minutes to draw out maximum performance.

[Examples of geometric error]

With just a touch probe and datum sphere —auto tuning completed.

High accuracy maintained over long times in 5-axis machining

The unique approach of “accepting temperature changes”

Thermo-Friendly Concept

5-Axis Auto Tuning System accuracy maintained

Accuracy changes due to changes in ambient temperature or spindle heat are minimized. When the 5-Axis Auto Tuning System is also used, a synergistic effect is achieved with the two Intelligent Technologies and high accuracy is maintained in 5-axis machining even when the environmental temperature changes.

With simultaneous 5-axis control that produces excellent machined surface quality

Simultaneous 5-axis kit makes it even easier

Because “Machine & Control” OSP provides advanced features

High Speed Contouring Super-NURBS (5-axis specs) (Optional)

High speed NC function for high accuracy, high quality, and high speed machining of curved surfaces of any shape with newly-developed “sculptured-surface adaptive acceleration control.”

Tool center point control manual feed (Optional)

This feature will provide rotary operation with a tool point as the center when operating the rotary axes manually. When the table is swiveled, axis movement will occur with no change in the tool position on the workpiece.

Table origin coordinate manual feed (Optional)

A feature to perform X-Y-Z-axis manual feed (rapid traverse, cutting feed, pulse handle) when origin coordinate systems shift on a swiveling table.

Tool center point control II (Optional)

Function controls the path of the tool tip with respect to the workpiece on each axis so that the tool tip trajectory is linear with the axis travel command including the A, B, and C axes.

- In the case of simultaneous X-axis and B-axis commands with the linear command (G01), the tool path is a straight line when viewed from the workpiece.

Tool tilt compensation (Included in Tool Center Point Control II)

The tool angle on a workpiece (tool tilt) in 5-axis machining will change on a waving surface. CAM processing errors will cause the tool to stagger with unnecessary accel/decel and reverse angles during axis feed. Simul 5-Axis TTC will keep feedrates steady with a smooth sequence of commands to automatically correct tool tilt angles—resulting in shorter cycle times and smoother surface finishes

Easy-to-use 5-axis machine from well-considered design

Good access reduces operator burden

Good access of 515 mm to the center of the table is achieved by approaching from the trunnion axial direction. Access to the spindle is also good, reducing operator burden during machining preparation and increasing work efficiency.

Large working range for applicable workpieces

The machining area is large enough to handle workpieces with a maximum diameter of $\phi 500$ mm and maximum height of 400 mm. Tools can also reach the end of workpieces even with the table inclined at various angles, making 5-axis machining possible over a wide range.

Tools can be changed even with the trunnion in a swung position, contributing to reduced cycle times and improved machining accuracies.

Even the largest workpieces are machined with capacity to spare

Better visibility of machining status

The BC table structure allows confirmation of the workpiece status at an angle of 120° and the front door has a large window. LED lamps are used for bright, reduced-flicker lighting within the machining compartment, improving visibility of machining status.

Large machining area

- Swing range
 - B axis: $+90^\circ$ to -120°
 - C-axis: 360° (infinite rotation)
- Max workpiece size: $\phi 500 \times 400$ mm height
- Max workpiece diameter with large X-axis travel ($\phi 500$) peripheral cutting is possible
- Max workpiece weight: 300 kg

Visibility of the cutting edge at the time of cutting also excellent

High-spec basic performance delivers high-efficiency machining

High cutting capability with high output motors

A motor with maximum torque of 199 N-m is used on the spindle. Machining time can be shortened with high-efficiency machining. The use of a high torque motor on the turning spindle also gives high turning capacity.

Standard spindle

- Speed: $15,000 \text{ min}^{-1}$ (With turning specs: $12,000 \text{ min}^{-1}$)
- Max output: 22/18.5 kW (10 min/cont)
- Max torque: 199/146 N-m (5 min/cont)

Turning spindle (Optional)

- Table (turning spindle) spindle speed: $1,200 \text{ min}^{-1}$
- Max output: 15/10 kW (15 min/cont)
- Max torque: 477/318 N-m (15 min/cont)

Machining Time Shortening Function

This shortens machining time in operations with repeated rapid traverse (G00) and cutting feed (G01) movements, such as for parts with many drilled holes.

(The amount by which machining time is reduced will differ depending on machine setup, machined part shape, and part program.)

High-specced basic performance capacity delivers highly efficient machining

Flexible automation options

ATC magazine systems

- Chain magazine: 48, 64 tools
- Matrix magazine: 64, 98, 132, 166, 200, 234, 268 tools

Extra ports for complex hydraulic or pneumatic fixture arrangements

- Max ports: 8 ports* (Optional)

Auto tool gauging with workpiece mounted

Tool breakage detection/Automatic tool compensation

Automatically measures workpiece alignment and dimensions

Auto zero offset, auto gauging (radio-controlled touch probe)

Auto pallet changer (APC)

- External setup of workpiece preparations improve machine utilization
- The good approach from the machine front is not compromised thanks to a structure in which pallet changes with an APC are done on the right side.
- Turning specs can also be selected

Safe, reliable chip discharge

Excellent chip discharge

Recommended Chip Conveyors

(Please contact an Okuma sales representative for details.)

High-accuracy 5-axis machining with Intelligent Technology

The unique approach of “accepting temperature changes”
Thermo-Friendly Concept

Thermo-friendly structure gives outstanding thermal stability

Eliminate waste with the Thermo-Friendly Concept

In addition to maintaining high dimensional accuracy when room temperature changes, Okuma’s Thermo-Friendly Concept provides high dimensional accuracy during machine startup and machining restart.

To stabilize thermal deformation, warming-up time is shortened and the burden of dimensional correction during machining restart is reduced.

TAS-C (Thermo Active Stabilizer—Construction) [Optional]

The TAS-C environmental thermal deformation control accurately controls the machine’s structural thermal deformation; by taking into consideration the machine’s thermal deformation characteristics, temperature data from properly placed sensors, and feed axis positioning information.

Machine tool idling stop ECO Idling Stop

Only the necessary units run

Accuracy ensured, cooler off ECO Idling Stop

Intelligent energy-saving function with the Thermo-Friendly Concept.

The machine itself determines whether or not cooling is needed and cooler idling is stopped with no loss to accuracy. (Standard application on machines with Thermo-Active Stabilizer—Spindle)

On-the-spot check of energy savings ECO Power Monitor

Power is shown individually for spindle, feed axes, and auxiliaries on the OSP operation screen. The energy-saving benefits from auxiliary equipment stopped with ECO Idling Stop can be confirmed on the spot.

TAS-S (Thermo Active Stabilizer—Spindle) [Optional]

The TAS-S spindle thermal deformation control takes into account various conditional changes such as the spindle’s temperature data, modification of the spindle rotation and speed, as well as spindle stoppage. The spindle’s thermal deformation will be accurately controlled, even when the rotating speed changes frequently.

ECO suite benefits

Electricity consumption during non-machining time greatly reduced with “ECO Idling Stop”, which shuts down each piece of auxiliary equipment not in use.

ECO suite provides a suite of energy-saving functions that can be used on machines

- “ECO Idling Stop” for operation of necessary units only
- “ECO Power Monitor” for visual graphics of power
- Intermittent/continuous operation of chip conveyor and mist collector during operation — “ECO Operation” (Optional)
- Energy-saving hydraulic unit using servo control technology — “ECO Hydraulics” (Optional)

Gauging and compensation of geometric error
5-Axis Auto Tuning System (Optional)

Higher accuracies in 5-axis machining

5-axis machining accuracy is greatly affected by misalignment and other “geometric errors” on the rotary axis. The 5-Axis Auto Tuning System measures geometric error using a touch probe and datum sphere, and performs compensation using measurement results to tune the movement accuracy on 5-axis machines. In this way 5-axis machining accuracy on a higher level is achieved.

Quick and easy tuning by anyone

Previously, manual measurements of the indexing center were bothersome and time-consuming, but with the 5-Axis Auto Tuning System the measurements are made automatically by the machine. Measurements can therefore be done with stable accuracy in a short time by anyone. (Up to 11 geometric errors tuned automatically.) In addition, the results of tuning are applied regardless of whether the operation in auto, manual, or MDI and whether Tool Center Point Control is on or off. Setup and machining can therefore be done with the same operations as before.

Collision prevention
Collision Avoidance System (Optional)

World’s first “Collision-Free Machine”

NC controller (OSP) with 3D model data of machine components—workpiece, tool, chuck, fixture, headstock, turret, tailstock—performs real time simulation just ahead of actual machine movements. It checks for interference or collisions, and stops the machine movement immediately before collision. Machinists (novice or pro) will benefit from reduced setup and trial cycle times, and the confidence to focus on making parts.

Optimized Servo Control
SERVONAVI

Achieves long term accuracy and surface quality

SERVONAVI AI (Automatic Identification) Optimum settings automatically identified

Automatically estimates the workpiece weight on the table and optimizes the table rotation axis acceleration for the weight. Stable machining of heavy workpieces and faster machining of light workpieces.

Cutting condition search for milling
Machining Navi M-i, M-g II+ (Optional)

Adjust cutting conditions while monitoring the data (M-i)

Built-in sensors measure chatter vibration and the machine automatically changes to the best spindle speed.

Machining Navi (M-g II+)

Navigates effective measures by detecting and analyzing machining chatter with a microphone attached to the machine.

*1. Spindle accepts 7/24 No. 40 (BIG-PLUS®, Super BT), or HSK-A63 tapers.
*2. Okuma pull stud required (End-face grinding, O-ring, and through-hole diameter differ from those of commercial pull studs.)
*3. Required for high-speed spindles

Spindle torques, power graphs (Optional)

High-speed spindle

- Speed: 20,000 min⁻¹
- Max output: 30/22 kW (10 min/cont)
- Max torque: 57/42 N-m (10 min/cont)

High-speed spindle

- Speed: 25,000 min⁻¹
- Max output: 15/11 kW (10 min/cont)
- Max torque: 29.1/19.9 N-m (10 min/cont)

The Next-Generation Intelligent CNC *OSP suite* *OSP-P300MA/SA*

Meet Okuma's control package of "visual and digital" shop floor production instructions, setup data, cutting and utilization status, machine maintenance information, and more.

The control interface itself adds a new dimension to ease of use—the more intelligent and faster way to manufacture high-quality components.

■ “suite apps”

In addition to Okuma's Intelligent Technology, a rich array of applications is available for visualization and digitization of information needed on shop floors to support high-level “Monozukuri”/manufacturing.

Maintenance Monitor that displays daily and regular check items

Actual Load

MacMan Monitor

Tool Data

■ “suite operation”

Use of a multi-touch panel achieves intuitive graphical operation. Finger moving, enlarging, reducing, and rotating 3D models, as well as scrolling list views of tool data, programs, and other information can be accomplished through smooth, speedy operations with the same feel as using a smart phone.

Smooth operations even with wet or work-gloved hands

Note: 15-in. operation panel screen shots.
Collision Avoidance System (Optional) shown above.

■ Standard Specifications

Basic Specs	Control	X, Y, Z, B, C simultaneous 5-axis, spindle control (1 axis)
